

## **Do's and Don'ts**

Do's and Don'ts for Health Care Staff Wearing Facemasks During the COVID-19 Pandemic\*

## Do's

Wear a cloth or medical facemask whenever you are within 6 feet of other people.

Wear a medical facemask as personal protective equipment when providing direct care.

- Change your facemask if it is damaged (e.g., torn, wet or visibly soiled) or becomes hard to breathe through.
- Remove ear loop facemasks by handling only the ear loops and tie face masks by handling only the ties.

Perform hand hygiene before and after removing a facemask.

Practice extended use of disposable medical facemasks (e.g., do not remove mask except to discard) rather than reuse (e.g., remove and store mask between uses) if supplies are limited.

In crisis situations, if a facemask must be re-used, store and handle in a manner that prevents contamination of the inside of the mask and wash hands after re-applying.

## **Don'ts**

Wear a cloth facemask as personal protective equipment (e.g., when providing direct care to a patient).

Remove your mask unless you are at least 6 feet away from other people, this includes co-workers, visitors and patients.

- XTouch the front of a used mask during use or removal.
- Wear a facemask that is soiled, damaged or hard to breathe through.
- Wear a medical facemask for aerosol generating procedures (use an N95, Elastomeric, or Powered Air Purifying Respirator for these procedures).
- Reuse medical facemasks unless the organization has reached crisis situation and has contacted the local health authority and no alternative or additional supplies can be anticipated.

\* Facemasks are just one element that should be used in conjunction with other measures, such as social distancing, to protect people from exposure to COVID-19. When facemasks are worn as PPE they must be used with other PPE as determined by the clinical situation and facility policies and procedures.
